### What is Prodentim?

Prodentim is a groundbreaking oral health supplement designed to improve the condition of your teeth and gums. This innovative product combines 3.5 billion probiotics and plant-based ingredients to restore the balance of beneficial bacteria in the mouth, freshen breath, prevent

gum issues, and boost overall oral hygiene. The chewable tablets are simple to use and are ideal for individuals with a busy lifestyle, offering a convenient solution for those wanting better dental health.

Backed by the latest advancements in oral microbiome research, Prodentim addresses the root cause of common dental problems—a disrupted balance of bacteria in the mouth. Unlike traditional dental products that often focus on killing bacteria, Prodentim aims to promote the growth of healthy bacteria while suppressing harmful microorganisms.

## How Does Prodentim Work?

The primary purpose of Prodentim is to introduce probiotics into the oral cavity. These probiotics help maintain oral health by preventing the growth of harmful bacteria that cause issues like tooth decay, gum disease, and bad breath.

The mouth is home to billions of bacteria, both beneficial and harmful. Prodentim helps to keep this balance in check by replenishing the good bacteria, which in turn helps to reduce problems such as plaque, gum inflammation, and bad breath. A balanced microbiome in the mouth can also strengthen your immune system and improve overall health.

Additionally, Prodentim's ingredients help to reduce gum inflammation, boost immune function, and support digestive health. Regular use of Prodentim can offer long-term benefits like strengthening teeth, promoting fresh breath, and even whitening teeth.

## Key Ingredients in Prodentim

Prodentim's effectiveness lies in its carefully selected ingredients, all chosen for their proven benefits to oral health. Here's a breakdown of some of the key components:

- ***Lactobacillus paracasei***: A probiotic that helps maintain the balance of beneficial bacteria in the mouth. It aids in breaking down food and fighting harmful bacteria, preventing plaque buildup and gum inflammation.
- ***B.lactis BL-04®***: Known for its positive effects on gut health, this strain also supports oral health by regulating the bacterial balance in the mouth and immune system, helping to prevent infections.
- ***Lactobacillus reuteri***: This probiotic inhibits the growth of harmful bacteria that can cause dental problems like tooth decay and gum disease. It also helps reduce inflammation, promoting healthier gums.
- ***Inulin***: A prebiotic fiber that encourages the growth of good bacteria in the mouth, helping to prevent bad breath and gum disease by supporting the oral microbiome.
- ***Malic Acid***: Naturally found in fruits, this acid helps stimulate saliva production, preventing dry mouth and maintaining a healthy oral environment. It also has natural

whitening effects, reducing stains on teeth.

- **Tricalcium Phosphate:** A mineral that strengthens tooth enamel, helps prevent cavities, and protects teeth from sensitivity.
- **Peppermint:** Known for its antibacterial and anti-inflammatory properties, peppermint fights bad breath and soothes irritated gums.
